

## INSTRUCTIONS FOR WASP CONTROL

### WASP SPRAY

If you have a visible hanging nest you can use a contact spray to eliminate them. Use a spray that is registered to kill wasps, as sprays intended for flies may not work. Make sure this treatment is performed only at night or when it is almost dark. Make sure to be fully clothed, covered as much as you can from head to toe. They are not likely to exit the nest, but it is best to be prepared. Set out a flashlight pointing away from you. Any wasps that exit the nest will be attracted to the light.

Saturate the interior of the nest first, once you have done this, follow up by saturating the entire exterior of the nest. Leave the nest for approximately 24 hours and remove the nest the following evening. Make sure that before you remove the nest that there isn't any further activity. When removing, take the same precautions as mentioned earlier. Be sure to remove the entire nest, including any pieces that fall to the ground during removal.

### JET FOAM

Foam can also be used instead of a spray when a nest is visible. Please be sure to take the same safety precautions as mentioned above. When using the foam, first fill the hole on the underside of the nest. Once this is done, no wasps will be able to leave the nest. Then attach the straw to the nozzle of the spray and puncture the nest with it, filling it with foam. Leave the nest for approximately 24 hours and remove.

### INSECT DUST

If you are treating an area where wasps are frequently traveling in and out of (a hidden nest), you should be using an insecticide dust. The reason for the use of dust over the spray in these situations is due to the fact that when you spray into the cracks/holes, you aren't necessarily spraying the nest. You are more than likely spraying the back of a wall, missing the nest completely. Instead, using a dust allows the insect to track through it, contaminating whatever they come into contact with.

Again, be sure to perform the treatment only at night, or when it is almost dark, and take the necessary safety precautions mentioned above.
